## FUND DESCRIPTION

This portfolio is mainly invested in equities, both developed and emerging market equities. To help provide some diversification within the portfolio, there are also allocations to property and alternative assets. The alternative assets include financial instruments linked to the price of commodities and specialist alternative fund managers who aim to provide exposure to a range of different asset classes and management styles. Investors in this portfolio fund aim to achieve relatively high rates of investment return and understand that to achieve this, a relatively high level of risk needs to be taken within a portfolio. This may result in significant falls in asset values especially over short time periods.

**Warning: If you invest in this product you may lose some or all of the money you invest.**

The assets in this fund may be used for the purposes of securities lending in order to earn an additional return for the fund. While securities lending increases the level of risk within the fund it also provides an opportunity to increase the investment return. External asset managers may change over time. Underlying funds or investments may be subject to incentive fees. This fund may borrow to invest which increases both the risk and opportunity for return.
